

Habitat is an environmental consulting company founded in 2017 based in Montreal. The firm offers nature-based solutions to support and accelerate the ecological transition of its clients in a context of a global green recovery. We are seeking a motivated spatial analyst to join our growing projects team.

Over the past four years, Habitat has supported the ecological transition of a diverse clientele. The team collaborates with universities, research centers and non-governmental organizations to apply current research in ecology, forestry and conservation to landscape planning. The firm offers its clients a range of innovative nature-based approaches and strategies at the forefront of scientific research.

We are seeking a motivated individual to join our projects team to undertake advanced spatial analyses within the context of client-based and research-based projects at Habitat. Specifically the selected individual will be called upon to realize geospatial mapping and analytics to evaluate ecological connectivity, biodiversity and ecosystem service provisioning.

Skills and qualifications:

- Master's degree in biology, ecology, forestry, geography or other related field
- Advanced programming skills with R (sf, raster, terra)
- Geomatics skills with QGIS and GRASS
- Experience in geomatic database management with PostGIS, PostgreSQL and OsGeo4W
- Ideally, at least 2 years experience in carrying out projects in ecology, biology or other related fields

Start date: 19 July 2021

Workplace: Montreal, QC

Contract: Full time, 1 year contract with possibility of renewal
