

Nanofabrication of Industrial Quantum Photonic Circuits - Postdoctoral fellowship

Record number : OPR-1098

Overview

RESEARCH DIRECTION

Dominique Drouin, Professeur -
Department of Electrical and Computer
Engineering

INFORMATION

dominique.drouin@usherbrooke.ca

RESEARCH CO-DIRECTION

Dominic Lepage, Responsable de
recherche - Department of Electrical and
Computer Engineering

INFORMATION

dominic.lepage@usherbrooke.ca

ADMINISTRATIVE UNIT(S)

Faculté de génie
Département de génie électrique et de
génie informatique

LEVEL(S)

Stage postdoctoral

LOCATION(S)

3IT - Institut interdisciplinaire d'innovation
technologique
Campus de Sherbrooke

Project Description

Context:

The goal of this project is the realization of integrated nanophotonic circuits enabling the addressing of qubits for industrial quantum sensors. Such systems are to be employed as room temperature ultra-sensitive magnetometers in the fields of geological exploration, defense, navigation, medical imaging, and for the development of quantum computers. This embodies a pioneering quantum technology to be brought early to the market and adopted on a large scale.

This fully funded post doctoral-internship project is part of the Canadian National Quantum Strategy and the Quebec Quantum Innovation Zone. Our team at the Interdisciplinary Institute for Technological Innovation (3IT) is developing impactful and practical solutions in close collaboration with SB Quantum, the National Research Council of Canada, the MiQro Innovation Collaborative Centre, and the Quantum Institute.

Research project:

The assignment of the graduate applicant is the development of nanofabrication protocols for the large-scale commercialization of quantum photonic devices. In addition to miniaturization, this project seeks to achieve a significant increase in efficiency compared to alternative commercial products by exploiting an integrated optically detected magnetic resonance technology (ODMR). The completion of this project is expected to have a major impact for the research partners and the quantum industry in Canada as a whole. The PhD candidate will have the opportunity to thrive in the cleanroom environment of 3IT to develop various industrial microfabrication processes:

- Preparation of thin films samples: Metals, Diamond, Al₂O₃, Si₃N₄, SiO₂.
- Resin coating, electro and photo lithography, plasma deposition and etching.
- Wet bench manipulations.
- Nanostructure metrology using ellipsometry, electron and atomic force microscopy.

Supervision & work environment:

USherbrooke.ca/recherche

The project will be conducted under the co-supervision of Dr Dominic Lepage and Pr Dominique Drouin. The selected individual will interact regularly with all collaborators but will conduct most of the work at the 3IT. The candidate will benefit from an exceptional research environment where students, professionals, teachers, and industry experts closely collaborate for the advancement of future technologies.

Researched profile:

The desired candidate should have a strong academic record, a PhD in a related field of physics or engineering, hands-on laboratory skills, a sense of creativity, strong adaptability, and an interest in research for the development of optics/photonics/quantum sciences.

Familiarity with cleanroom environments, photonic systems, RF circuits or micromanipulations would be advantageous. Proficiency in French communication is a plus.

Because the research project involves sensitive technology, the applicant should not be affiliated with any of the countries where Canada is imposing sanctions.

Contacts: jobnano@usherbrooke.ca

Documents to provide: Cover letter, curriculum vitae and the contact information of two individuals familiar with your work.

Funding offered:

Funding and scholarships are secured by the Quantum Sensors Challenge Program of the National Research Council Canada.

This project can accommodate one or more students in the following programs:

- Postdoctoral fellowship

Discipline(s) by sector

Sciences naturelles et génie

Génie électrique et génie électronique

Funding offered

To be discussed

Funded by NRC & PROMPT

Partner(s)

SBQuantum, Centre de Collaboration MiQro Innovation (C2MI)
